1. PRECAUTIONS BEFORE STARTING OPERATION

1) Safety Precautions

- (1) When turning the power on, keep your hands and fingers away from the area around/under the needle and the area around the balance wheel.
- (2) Power must be turned off when the machine is not in use, or when the operator leaves the seat.
- (3) Power must be turned off when tilting the machine head, installing or removing the "V" belt, adjusting the machine, or when replacing.
- (4) Avoid placing fingers, hairs, bars etc., near the balance wheel, "V" belt, bobbin winder balance wheel, or motor when the machine is in operation.
- (5) Do not insert fingers into the thread take-up cover, under/around the needle, or balance wheel when the machine is in operation.
- (6) If a belt cover, finger guard, eye guard are installed, do not operate the machine without these safety devices.

2) Precautions before Starting Operation:

- (1) If the machine's oil pan has an oil sump, never operate the machine before filling it.
- (2) If the machine is lubricated by a drop oiler, never operate the machine before lubricating.
- (3) When a new sewing machine is first turned on, verify the rotational direction of the balance wheel with the power on. (The balance wheel should rotate counter-clockwise when viewed from the balance wheel)
- (4) Verify the voltage and (single or three) phase with those given on the machine nameplate.

3) Precautions for Operating Conditions:

- (1) Avoid using the machine at abnormally high temperature (35°C or higher) or low temperature (5°C or lower) .
- (2) Avoid using the machine in dusty conditions.

2. MAIN SPECIFICATIONS

Specs \ Model		2-step	4-step
Max.sewing speed		4500 rpm	
Feed pitch		2.5mm	2 mm
Zigzag width		5mm	10 mm (Standard 8 mm)
Presser	By hand	5.5mm	
	By knee	10mm	
Needle		DP×5 9#—14#	
Rotating hook		Auto lubricated hook	
Lubrication		Auto lubricated	
Motor		370W clutch motor	

3. PREPARATION AND LUBRICATION

1) Cleaning the machine

Before leaving the factory, the machine parts are coated with rust-preventive grease, which may be hardened and contaminated by dust during storage and shipment. This grease must be removed with gasoline.

2) Examination

Though every machine is confirmed by strict inspection and test before leaving the factory, the machine parts may be loose or deformed after long distance transportation with jolt. A thorough examination must be performed after cleaning the machine. Turn the balance wheel to see if there is running obstruction, parts collision, uneven resistance or abnormal noise. If these exist, adjustment must be made accordingly before run-in operation.

3) Oiling (Fig.1)

(1) Required amount of oil

Line (A) on the oil reservoir: Max. Oil level

Line (B) on the oil reservoir: Min. Oil level

If oil level goes down under line B, oil cannot be distributed to each part of the machine, thus causing the parts a seizure.

(2) Replenishing

Always use only No. 18 special machine oil for high speed sewing. Be sure to replenish oil to line A before starting operation.

(3) Replacing oil

To replace oil, remove screw (C) to drain oil. After completely draining off oil, clean the oil reservoir and securely tighten screw (C), then fill the reservoir with fresh oil.

4. REPLACE NEEDLES (Fig.2)

Turn the handwheel by hand to raise the needle bar to the highest point. Loosen the needle clamp screw ①, hold the needle ② so that the long groove B on the needle is facing exactly toward you. Insert the needle deep into the hole of the needle bar in the direction of the arrow until it will go no further. Securely tighten the screw ①.

5. WINDING THE BOBBIN THREAD (Fig.3, 4)

1) Insert the bobbin deep into the bobbin winder spindle ③ until will go no further.

2) Pass the bobbin thread pulled out from the spool rested on the right side of the thread stand following the order as shown in the figure on the left. Then, wind the end of the bobbin thread on the bobbin several times.

3) Press the bobbin winder trip latch ⑥ in the direction of A and start the sewing machine. The bobbin rotates in the direction of C and the bobbin thread is wound up. The bobbin winder spindle ③ will automatically stop as soon as the winding is finished.

4) Remove the bobbin and cut the bobbin thread with the thread cut retainer ⑤.

5) To adjust the winding amount of the bobbin thread, loosen the setscrew ⑦ and move the bobbin winder trip latch ⑥ to the direction A or B. Then, tighten the setscrew.

To the direction A: Decrease; To the direction B : Increase.

6) In case that the bobbin thread is not wound evenly on the bobbin , loosen the nut ⑧ and turn the bobbin thread tension to adjust the height of the thread tension disk ②.

It is the standard that the center of the bobbin is as high as the center of the thread tension disk.

Move the position of the thread tension disk ② to the direction A as shown in the figure on the left when the winding amount of the bobbin thread on the lower part of the bobbin is excessive and to the direction B as shown in the figure on the left when the winding amount of the bobbin thread on the upper part of the bobbin is excessive. After the adjustment, tighten the cut ⑧.

6. THREADING THE MACHINE HEAD (Fig. 5)

Turn the handwheel by hand to raise the needle to the highest point. Pass the thread in the order of the

numbers as illustrated.

7、 ADJUSTING THE STITCH LENGTH (Fig. 6)

1) Adjusting the stitch, turn the stitch length dial A in the direction of the arrow so that the number corresponding to the desired stitch length meets the marker dot B engraved on the machine arm. (Number on the stitch length dial are calibrated in "mm".)

2) To perform reverse feed stitching, press down the feed lever C. The sewing machine performs reverse feed stitching as long as you keep the feed lever held pressed. The feed lever will return to its home position and the sewing machine will run in the normal stitching direction when you release the feed lever.

8、 ADJUSTING THE HEIGHT OF THE PRESSER (Fig. 7)

To change the height of the presser bar or the inclination of the presser foot, loosen the presser bar connection screw ① and perform the adjustment properly. After the adjustment, securely tighten the screw.

9、 ADJUSTING THE PRESSURE OF THE PRESSER FOOT (Fig.8)

Pressure of presser foot is to be adjusted in accordance with thickness of materials to be sewn. First loosen lock nut 1, turn the presser spring regulator 2 clockwise A to increase the pressure given by the presser foot; turn the presser spring regulator counterclockwise B to decrease it. Then tighten lock nut 1.

The pressure of presser foot is recommended to be less as long as normal feeding is ensured.

10、 ADJUSTING THE THREAD TENSION (Fig.9, 10)

1) Adjusting the needle thread tension (Fig.9)

Adjust the needle thread tension using the tension nut 4. Turning the tension nut clockwise increases the needle thread tension, or counterclockwise decreases it.

2) Adjusting the thread take-up spring (Fig.10)

To change the tension of the thread take-up spring, firmly tighten the screw A which fastens the tension post socket to the machine arm and insert the blade of a screwdriver into the slot in the tension post B to adjust the tension of the thread take-up spring.

3) Adjusting the thread take-up spring stroke (Fig. 10)

Loosen the clamping screw A of the tension post socket and turn the tension post socket C.

Adjustable range of the amount of thread taken by the thread take-up spring.....6 to 10 mm.

11. ADJUSTING THE BOBBIN

THREAD TENSION (Fig.11)

The tension of the bobbin thread is adjusted by turning the tension adjusting screw A.

Turn it clockwise to increase.

Turn it counterclockwise to decrease.

It is common practice to test the bobbin thread tension as shown in Fig.11. Hold the end of the thread from delivery eye. If the bobbin case is falling slowly, the proper tension is obtained. The

needle thread tension can be adjusted by setting (1) the take-up spring tension, (2) the thread take-up spring stroke and (3) tension spring. All these adjustments will be described in the following.

12. ADJUST THE ZIGZAG WIDTH (Fig.12, 13)

1) Adjust the zigzag width

The zigzag width is adjusted by the knob ①.

2) Changing the needle position

when changing the position of needle entry, move the needle position changing lever as shown in the figure13.

13. ADJUSTING THE DENSER STITCHING

(Fig.14)

Stitch length can be reduced at the start or end of sewing. This feature is used for fastening stitch.

1) If you turn the dial with the feed lever held pressed down, the feed lever will move. Adjust the stitch length for denser stitching taking the graduation which meets the top surface of the feed lever as reference;

2) Turn the dial in the "+" direction to reduce the reverse feed stitch length. "+2" means "normal feed stitch length is 2mm" and "-2" means "reverse feed stitch length is 2mm".

Advert: The graduations on the dial are mere reference. So adjust the denser stitching while actually observing the finished seam.

14. ATTACHING / REMOVING THE HOOK

(Fig.15)

When you replace the sewing hook, remove it in the following procedures:

1) Turn the handwheel until the needle reaches to its highest position ;

2) Remove the needle, presser foot, throat plate, feed dog and bobbin case from the machine;

3) Remove the setscrew 1 and take out the bobbin case positioning finger 2;

4) Loosen the two screws 4 and remove the sewing hook.

Reverse the above procedures when inserting the sewing hook. Advert: At this time, make sure that top end A of the bobbin case positioning finger is aligned with line B. as shown in the figure 15. Never let A protrude from line B.

15. ADJUST THE POSITION OF

FEED DOG (Fig.16)

To adjust the height of the feed dog

1) Loosen the screw 1 and turn the feed driving link pin 2 using a screwdriver;

2) The standard height of the feed dog is 1.2mm.

Inclination of the feed dog (The standard inclination of the feed dog is obtained by adjusting the feed dog so that it becomes horizontal when it rises above the top surface of the throat plate).

16. ADJUSTING HEIGHT OF THE NEEDLE BAR (Fig.17)

1) Set the zigzag width to "0". Bring the needle to the center of zigzag stroke;

2) Remove the presser foot, throat plate, semicircle plate and feed dog;

3) Place the semicircle plate A on the plane, to which the throat plate is to be attached, of the bed. Loosen the screw ①, and adjust so that a height difference of timing gauge 1 is provided between the lowest end of the needle bar and the top surface of the semicircle plate.

17. ADJUSTING THE NEEDLE TO HOOK TIMING AND THE NEEDLE GUARD (Fig.18, 19)

(Fig.18, 19)

1) **Positioning the hook:** ①After the completion of the adjustment of the needle bar height, adjust the hook using gauge 2 so that the blade point of the hook is aligned with the center of the needle. ②Confirmation: maximize the zigzag width, bring the needle to the leftmost position of the zigzag stroke. Now, confirm that the top end of the needle eyelet is spaced 0.2-0.5mm away from the blade point of the hook.

2) **Adjusting the needle guard:** ①Maximize the zigzag width. Bend the needle guard to adjust so that the needle does not come in contact with the blade point of the both at

the leftmost and rightmost positions of the zigzag stroke. At this time, adjust the clearance provided between the needle and the blade point of the hook to 0 to 0.05 mm. ②The needle guard functions to keep the needle away from the blade point of the hook, thereby preventing damage to the blade point of the hook. Whenever you have replaced the hook with a new one, be sure to adjust the position of the needle guard.

18. ADJUSTING THE AMOUNT OF OIL IN THE HOOK (Fig.20)

1) Tilt machine head, and adjust the amount of oil in the hook by turning the adjusting screw ① mounted on the hook driving shaft dear box. Loosen the nut ②, then turn the adjusting screw ①.

2) After the adjustment, fix the adjusting screw by tightening the nut ②.

19、 CHANGEOVER OF STANDARD ZIGZAG (Fig.21)

- 1) Turn handwheel by hand to bring needle to its lowest position;
- 2) Pull changeover lever 1 toward this side and pull out lock pin 2 from positioning hole 3;
- 3) Turn changeover lever 1 while pulling it and adjust it to zigzag mark 4 you desire. At this time, securely place lock pin 2 in positioning hole 3 and set it;
- 4) When changeover lever 1 cannot be turned, perform again the work of steps 1) to 3) after manually turning the handwheel by one turn (360°). Perform repeatedly until changeover work can be completed.

Caution: Never operate the sewing machine in the state that lock pin 2 is not placed in positioning hole 3 (on the way of changeover). It will cause the trouble of the sewing machine.

20、 PLACING A BOBBIN INTO THE BOBBIN CASE (Fig.22)

- 1) Take a bobbin by your right hand with the thread drawn out about 5 cm and place it into the bobbin case as illustrated;
- 2) Thread the bobbin case in the order of the numbers and pull it out through the thread path as illustrated;
- 3) Make sure that the bobbin rotates in the bobbin case in the direction shown by arrow.

A.ARM BED AND IT'S ACCESSORIES(1)

K.ACCESSORIES

Fig. No.	Part No.	Description	Qty.	Remarks
K01	HK304J7101	Oil reservoir assy.	1	
K02	HA104J0655	Oil reservoir gasket	1	730
K03	HK306J8001	Oil reservoir gasket	1	210
K05	HA104J0658	Connecting rot.	1	
K06	HA106J0663	Bracket	1	
K07	HA300J2160	Knee press rod	1	
K08	HK308J8001	Spring	1	
K09	HK309J8001	Rubber pluge	1	
K10	HA104J0653	Rubber ring	1	
K11	HA104J0652	Screw	1	5/16 " (28) × 10
K12	HA104J6510	Nut	2	
K13	HA104J0659	Screw	2	
K14	HA110D0672	Screw	1	
K15	HA300J2180	Screw	2	
K16	H007013090	E-ring	1	
K17	HK310J8001	Timming gaug	1	
K18	HA106J0661	Knee press lifter rod	1	
K19	HA100J2120	Magnet	1	
K20	HA106J0066	Knee press plate assy.	1	
K21	HA106J0665	Knee press plate	1	
K22	HA106J0668	Knee press plate cover	1	
K23	HA106J0662	Knee ligter plate rod	1	
K24	HA106J0666	Knee press plate holder	1	
K25	HA106J0667	Screw	1	
K26	HA200J2030	Thread stand assy.	1	
K27	HK341C8001	Needle	4	DP × 5 10#
K28	HK322H8001	Bobbin	3	
K29	HK314J8001	Belt cover	1	
K30	HA313J7101	Belt cover assy.	1	
K31	HA300B2160	Screw	3	11/64 (40) × 10
K32	H806045250	Wood screw	2	4.5 × 25
K33	50	Washer	2	φ 5
K34	HA110J0070	Hinge with rubber cushion	2	
K35	HA100J2090	Head cushion(large)	2	
K36	HA100J2100	Head cushion(small)	2	
K37	HB01020	Hexagon socket screw key 2mm	1	
K38	HB01030	Hexagon socket screw key 3mm	1	
K39	HA300J2070	Screw driver (L)	1	
K40	HA300J2200	Screw driver (M)	1	
K41	HA300J2210	Screw driver (S)	1	
K42	HD506S8001	Collar	1	
K43	HA305E0662	Screw	2	15/64 (28) × 4.5
K44	HA300J2170	Oil tank	1	

K.ACCESSORIES

Fig. No.	Part No.	Description	Qty.	Remarks
K45	HK317J8001	Oil reservoir base	1	
K47	HA100J2180	Head cover	1
