● Thread cutter

Attention

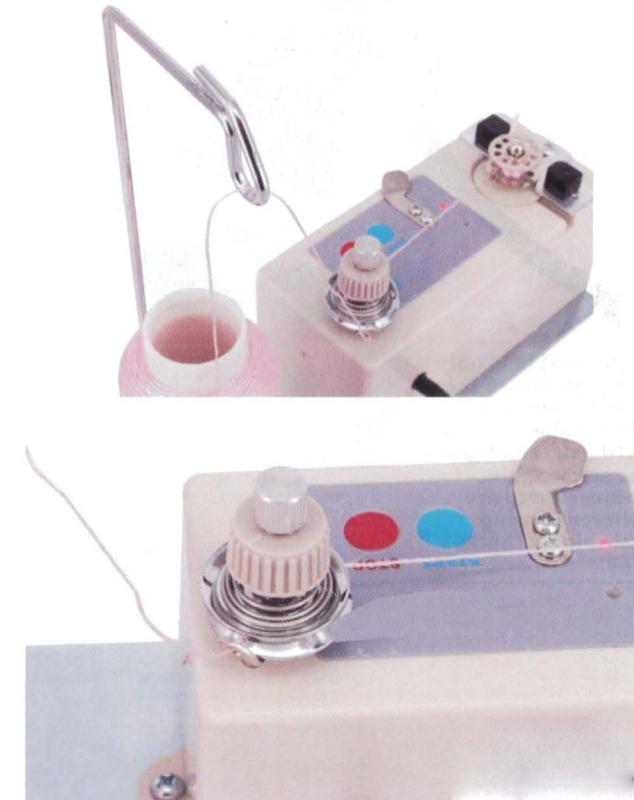

- A: The thread comes from the cone, through the thread stand, then to the little hole behind the tension adjuster, then go around clockwise between the tension disc, and several clockwise on the bobbin.
- B: Wooden screw option is for fixing the bobbin winder on wooden table. Metal screw option is for movable.
- C: You can adjust the tension sets nut up and down if the bobbin winder is not balanced.
- D: If the bobbin is only half full, loosen the screw to move the black inductor 2mm outward, then tighten the screw again.

Anyone who knows how to thread a sewing machine, should be able to thread this with no problems. Bobbins are tight and neat. Perfect for machine embroidery, longarm quilting machine. It does a excellent job winding bobbins of different size. If you are not satisfied with it, please give our helpful customer service team an opportunity to improve your experience right away, our team members are more than happy to help.

If the bobbin is only half full, loosen the screw to move the black inductor 2 mm outward, then tighten the screw again, because there are different sewing embroidery threads type.

4

The thread comes from the cone, through the thread stand, then to the little hole behind the tension adjuster. Bobbin winder thread about 10 circle by hand, insert it to the bobbin pin, then tensioning the thread, then press start button, it is automatic stop when bobbin is full.

3

Tips:

Adjust the tension knob on the middle of the tension disc: turn the tension knob up, it mean loose thread tension; turn tension knob down, it mean tighten thread tension.

2-layer inductor cover: These 2 black inductors can be disassembled. After use, clean the dust inside the inductor to prevents the bobbin from suddenly stopping when winding. (We suggest cleaning them every 15 days)
