Identifying and Ordering Parts

Where the construction permits, each part is stamped with its part number. On all orders, please include part number, part name and model name of machine.

Safety Rules

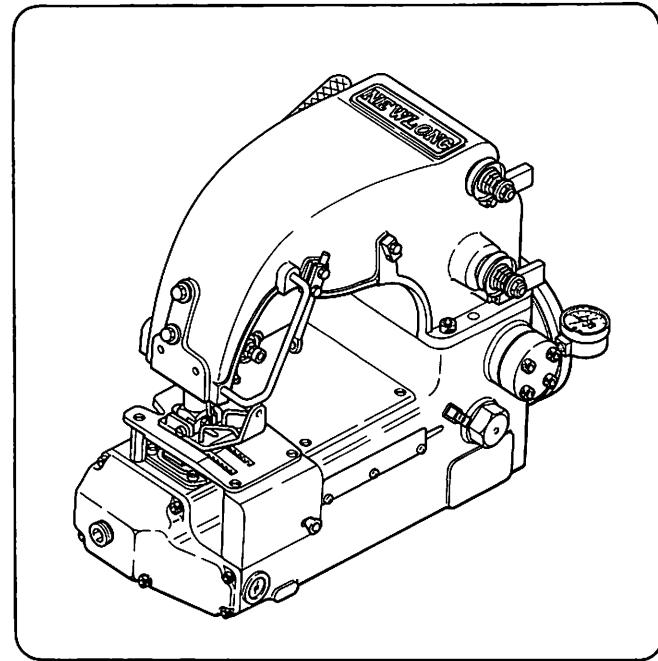

To prevent personal injury:

- All power sources to the machine must be turned off before threading, oiling, adjusting or replacing parts.
- All cover and guards must be in position before operating machine.
- Do not tamper with safety cover, guards, etc., while machine is in operation.

Maintenance

Please keep in mind to handle the machine carefully and to maintain the machine in good condition.

- Thread fuzz or dust must be cleaned with air or brush on throat plate, in the groove of feed dog or around looper after the day's work.

1. INSTALLATION

1-1 Motor Recommendations

Use a 0.75 KW (1/2 HP) 1725 R.P.M. (60 Hz) motor (1420 R.P.M. for 50 Hz). The variable pulley on the sewing head permits speed adjustment. Sewing head pulley must rotate clockwise.

At the beginning of each day or shift, make sure the oil level window at the lower portion of the sewing head shows oil at the "Oil Level" line. After about 30 seconds, the oil pressure gauge should read in the normal 0.2-0.65 kgf/cm² (3-9 pound) range. While the machine is running, the oil level window will show little or no oil. Never run machine if oil pressure gauge is in the red warning area.

1-2 Initial Lubrication

The sewing head is shipped from the factory oil filled.

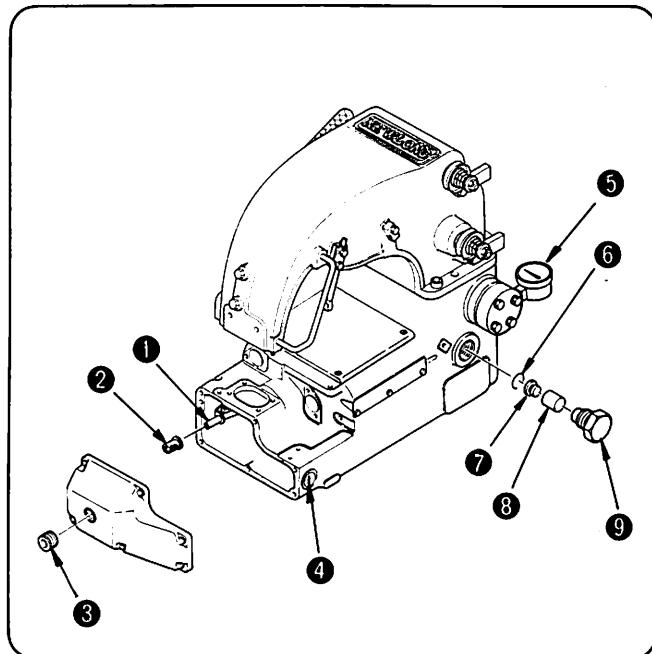

2. MAINTENANCE

2-1 Oil

Use special lubrication oil for the series DS-10 sewing head available from NEWLONG or its authorized representatives. As a substitute, any good grade of SAE 20 motor oil or its equivalent may be used. Three hundred cc (10 ounces) of oil will adequately fill the machine.

When adding or changing oil, remove breather plug and pour oil into breather plug hole. Fill until oil reaches "Oil Level" line on the oil level nindow. Never run machine if oil pressure gauge is in the red warning area. See Drawing 1.

To drain oil, remove magnetic drain plug and allow oil to drain. At oil change intervals, also clean oil intake filter and wipe any accumulation of particles off the magnetic drain plug. Inspect breather plug at least once a year and clean or replace foam filter element. Change oil every two months or 500 hours of operation, whichever comes first.

< Drawing 1 >

- | | | |
|-----------------------|----------------------|------------------------|
| ① Oil intake tube | ④ Oil level window | ⑦ Baffle |
| ② Oil intake filter | ⑤ Oil pressure gauge | ⑧ Breather plug filter |
| ③ Magnetic drain plug | ⑥ Snap ring | ⑨ Breather plug |

2-2 Seals

All seals must be handled with extreme caution. Any small amount of damage in handling or installation will permit leakage. When replacing a seal, saturate both it and the shaft thoroughly with oil before assembling. Never install a dry seal over a dry shaft.

2-3 Cleaning

Remove accumulations of lint from the looper area. If permitted to remain for long periods of time, these can set up a wicking action which will absorb oil from the machine. If the machine is operated around corrosive or sticky products, occasionally blow off or scrape such exposed parts as feed dog teeth, throat plate and presser foot. Also recommended is periodic hand oiling of presser foot hinge bolt and surfaces of cutting knife.

2-4 Cold Area Operation

In very cold areas allow machine to warm up by running steadily for a few minutes before closing any bags. Failure to do this, especially with units running on single phase current, can result in slow starting and running of the sewing head. This causes mis-synchronization with the speed of the conveyor belt which will break thread, badly scuff tape and cause sewing problems until the sewing head and motor warm up and attain proper speed.

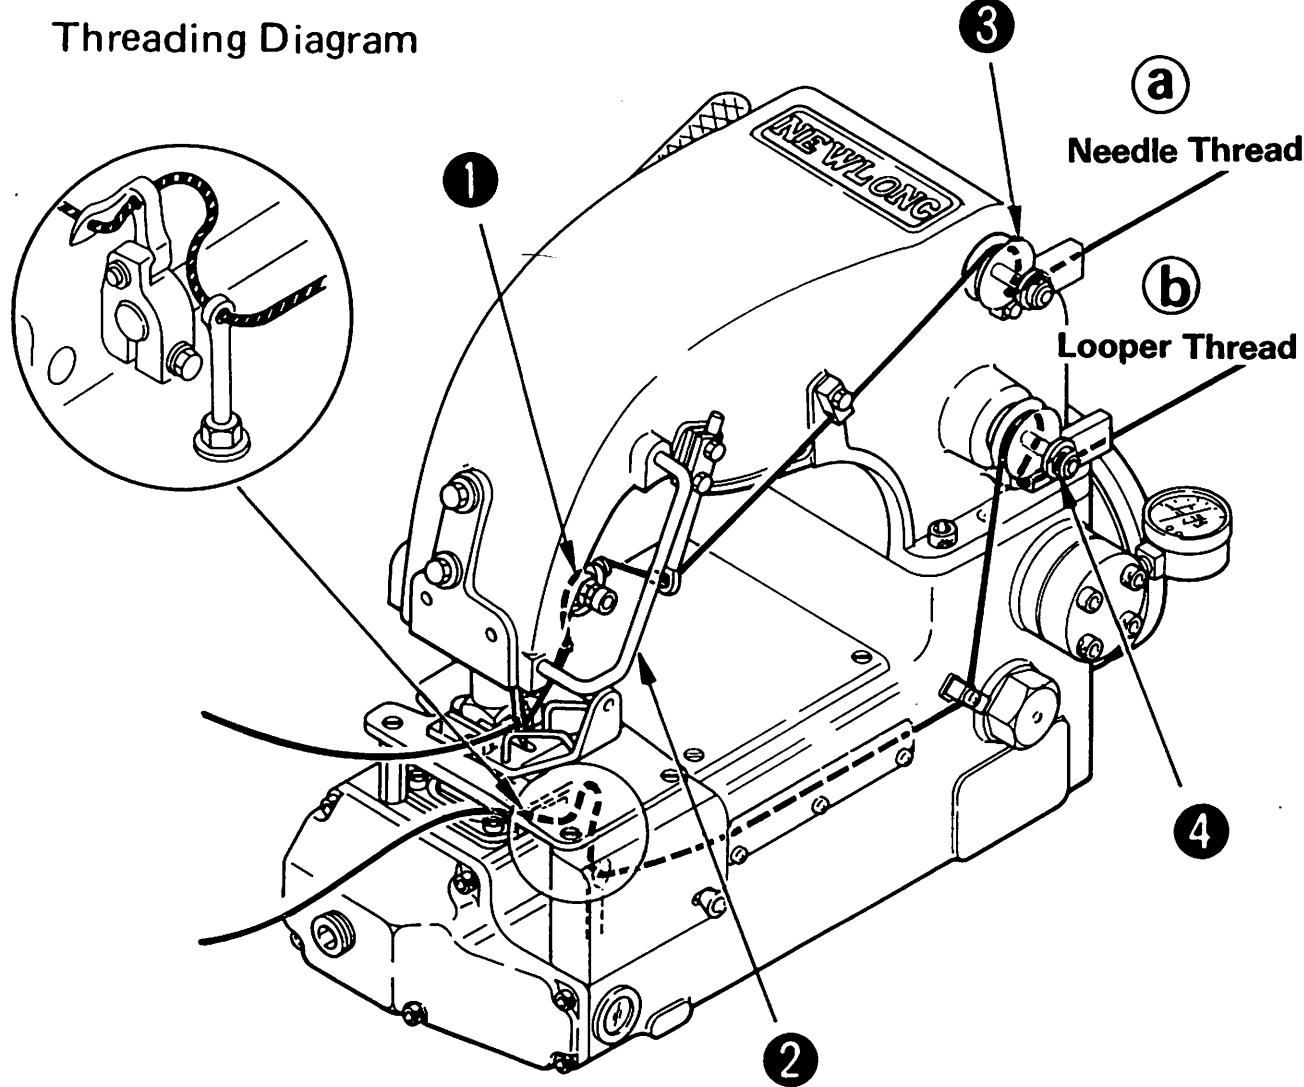

2-6 Threading

Follow the threading diagram below for proper threading. Be sure looper thread passes through both holes of the looper.

2-5 Running After Prolonged Shut-Down

After prolonged shut-down periods, the sewing head oil should be pumping properly and the sewing head and motor warmed up before closing any bag. This is easily accomplished by running the sewing head in short 2-3 second cycles until the oil pressure gauge reads in the normal 0.2-0.65 kgf/cm² (3-9 pound) range.

Threading Diagram

① Needle lever tension assembly

② Needle thread pull-off

③ Needle thread tension

④ Looper thread tension

< Drawing 2 >

2-7 Tensions

The looper tension must be very light, barely discernible when pulling thread by hand. The needle thread tension should be very firm and put a noticeable drag on the thread. The tension assembly located on the needle lever must put only light pressure, about the same as the looper tension, on the thread.

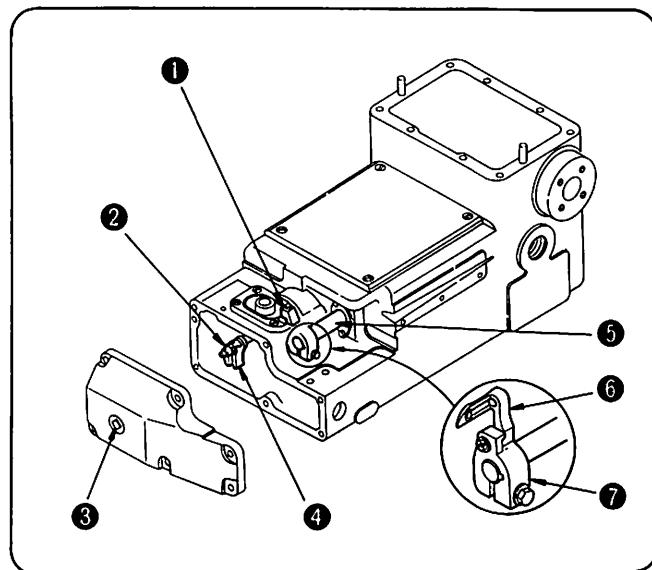

2-8 Needle Replacement

Be sure new needle is inserted into the needle chuck as far as it will go. Lock needle set screw against flat of needle shank. Caution: Use the small needle wrench provided with the machine. Excessive pressure on needle set screw can damage screw or needle chuck.

2-9 Stitch Length

To adjust stitch length, remove the magnetic drain plug on the bottom cover. Reach through the drain plug hole with a 4.8 mm. (3/16 inch) Allen wrench and loosen the socket cap screw on the feed rocker. Do not completely remove cap screw. To shorten stitch length, slide loosened cap screw towards the throat plate. To lengthen stitch, slide away from throat plate. Always make sure adjusting screw is securely re-tightened. For stitch length of two stitches/inch, use optional throat plate (C-10018) and feed dog (A-10079).

See drawing 3.

① Needle guard ⑤ Looper shaft < Drawing 3 >

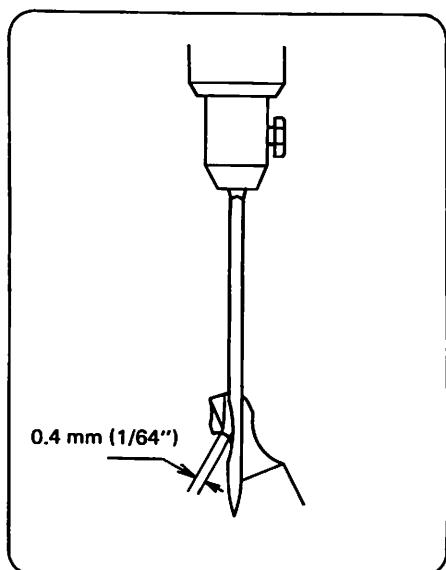

② Socket cap screw ⑥ Looper

③ Magnetic drain plug hole ⑦ Looper holder

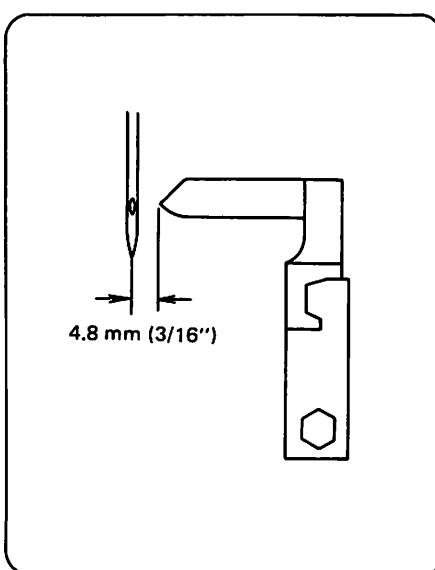

④ Feed rocker

2-10 Needle Thread Pull-Off

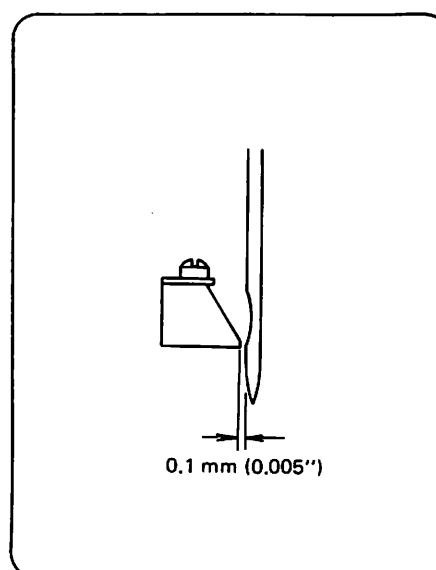

This adjustment can vary with different lengths of stitch, bag thickness and type of thread. The normal setting is 30.2 mm (1-1/4 inches) from center of thread hole in pull-off to the bottom of pull-off clamp.

< Drawing 4 >

< Drawing 5 >

< Drawing 6 >

2-11 Looper

The looper timing is set at the factory and should never be altered. If the looper only is replaced and the position of the looper holder has not changed, the only adjustment necessary is to provide the proper clearance of about 0.4 mm (1/64") as the looper passes the scarf of the needle. See Drawing 4 above.

2-12 Looper Holder

If the looper holder has been moved and needs resetting, it must be positioned on the looper shaft so that the point of the looper is 4.8 mm (3/16") from the center of the needle when the looper is at its farthest point back (towards the pulley end of machine). See Drawing 5 above.

2-13 Needle Guard

The needle guard is stationary and needs no adjustment. If it is replaced due to excessive wear or damage, it should be set so that the needle clears it by about 0.1 mm (0.005"). See Drawing 6 above.

2-14 Presser Foot Spring Pressure

To adjust the presser foot spring pressure, turn the hex adjusting screw on top of the lever housing. Turning the screw clockwise will increase the pressure, counter-clockwise will decrease pressure. The pressure has been set at the factory at about 18 kg (40 pounds), which should be adequate for most purposes.

2-15 Feed Dog Height

The teeth of the feed dog should protrude 1.6 mm (1/16") above the throat plate when at their highest point. No height adjustment of the feed dog should be necessary when replacing it. However, if the dog has been re-sharpened or is being raised to compensate for worn teeth (not recommended procedures), it will be necessary to loosen the feed dog carrier rod clamp and raise the feed dog carrier rod to restore the proper 1.6 mm (1/16") height of the feed dog teeth above the throat plate. Be sure to align the feed dog properly in the slots of the throat plate before securely locking the feed dog carrier rod.

3. TROUBLE SHOOTER

3-1 Synchronization

The sewing head must be synchronized with the conveyor belt. A model DS-10 sewing head should run about 10~15% faster than the conveyor. If a power top feed is used, it must also be synchronized with the conveyor. All conveyor models are properly synchronized at the factory, but differences in voltage between factory and customers plant might make minor adjustment necessary.

3-2 Oil

1. Check oil daily. Do not allow machine to run low. If oil pressure gauge needle does not remain above the red zone while machine is running, stop immediately.
2. At oil change intervals, remove bottom cover and clean, or if necessary, replace intake filter. See Page 2.
3. Remove accumulations of lint and dirt from looper area. If permitted to remain for long periods of time, these can set up a wicking action which will absorb oil from the machine.

3-3 Thread Breakage Or Skipping Stitches

1. Check to be sure nothing is interfering with the free passage of the thread from the cone all the way to the needle and looper.
2. Check to see that both needle and looper are threaded properly. See Drawing 2. If either are threaded improperly, it could cause the needle thread to break. Use the tweezers supplied with the machine to thread the top (or back) end of looper.
3. Check the needle thread pull-off. See Page 4. If bag is doubled over, add about 3.2 mm (1/8").
4. Check tension of both threads. See Page 4.

5. Replace needle. See Page 4.

6. Check condition of looper. If it is rough or has some nicks, replace it. See Page 4.
7. Check condition of throat plate. If it is rough or has nicks, replace it.
8. Check sharpness of feed dog. If dull, replace it. Note: Only the outside rows of teeth should be sharp. Do not sharpen center teeth.

3-4 Failure To Chain Off After Bag Is Sewn

1. Check items listed under thread breakage above.
2. Check presser foot pressure. It should be approximately 18 kg (40 pounds). See Page 5.

3-5 Uneven Stitch Length Or Poor Feeding

Check sharpness of feed dog and presser foot pressure.

3-6 Excessive Needle Breakage

1. Operator may be pulling bag through machine.
2. Sewing may be too close to contents of bag.
3. Check alignment of needle slot in presser foot to be sure needle does not rub.
4. Check to see that the needle chuck is parallel with side of machine.
5. Check sharpness of feed dog.
6. Check synchronization.

Memo—

● 御注文上の注意事項 ORDERING PARTS

- (1) 本部品表はDS-10A、DS-10Cの機種を兼用しますので、部品をご注文の際は、個数欄を参照して下さい。
- (2) 御注文の際は、部品番号、部品名称、個数を明記下さい。
- (3) 但し図番 (Ref. No.) の記入がない部品は、単体販売できませんので、それに該当する完備部品（組部品）をご注文下さい。

※本部品表は改良のため予告なく変更することがあります。

- (1) Description of each part and its stamp number is described in this parts list. Screws and nuts for parts are shown adjacent to the relevant parts. When ordering parts, describe clearly stamp number with its name of part.
- (2) Part that has no Ref. Number can not be delivered independently; always order it as an assembly.
- (3) This part list covers parts of not only DS-10A but also DS-10C. (refer to column of Quantity.)

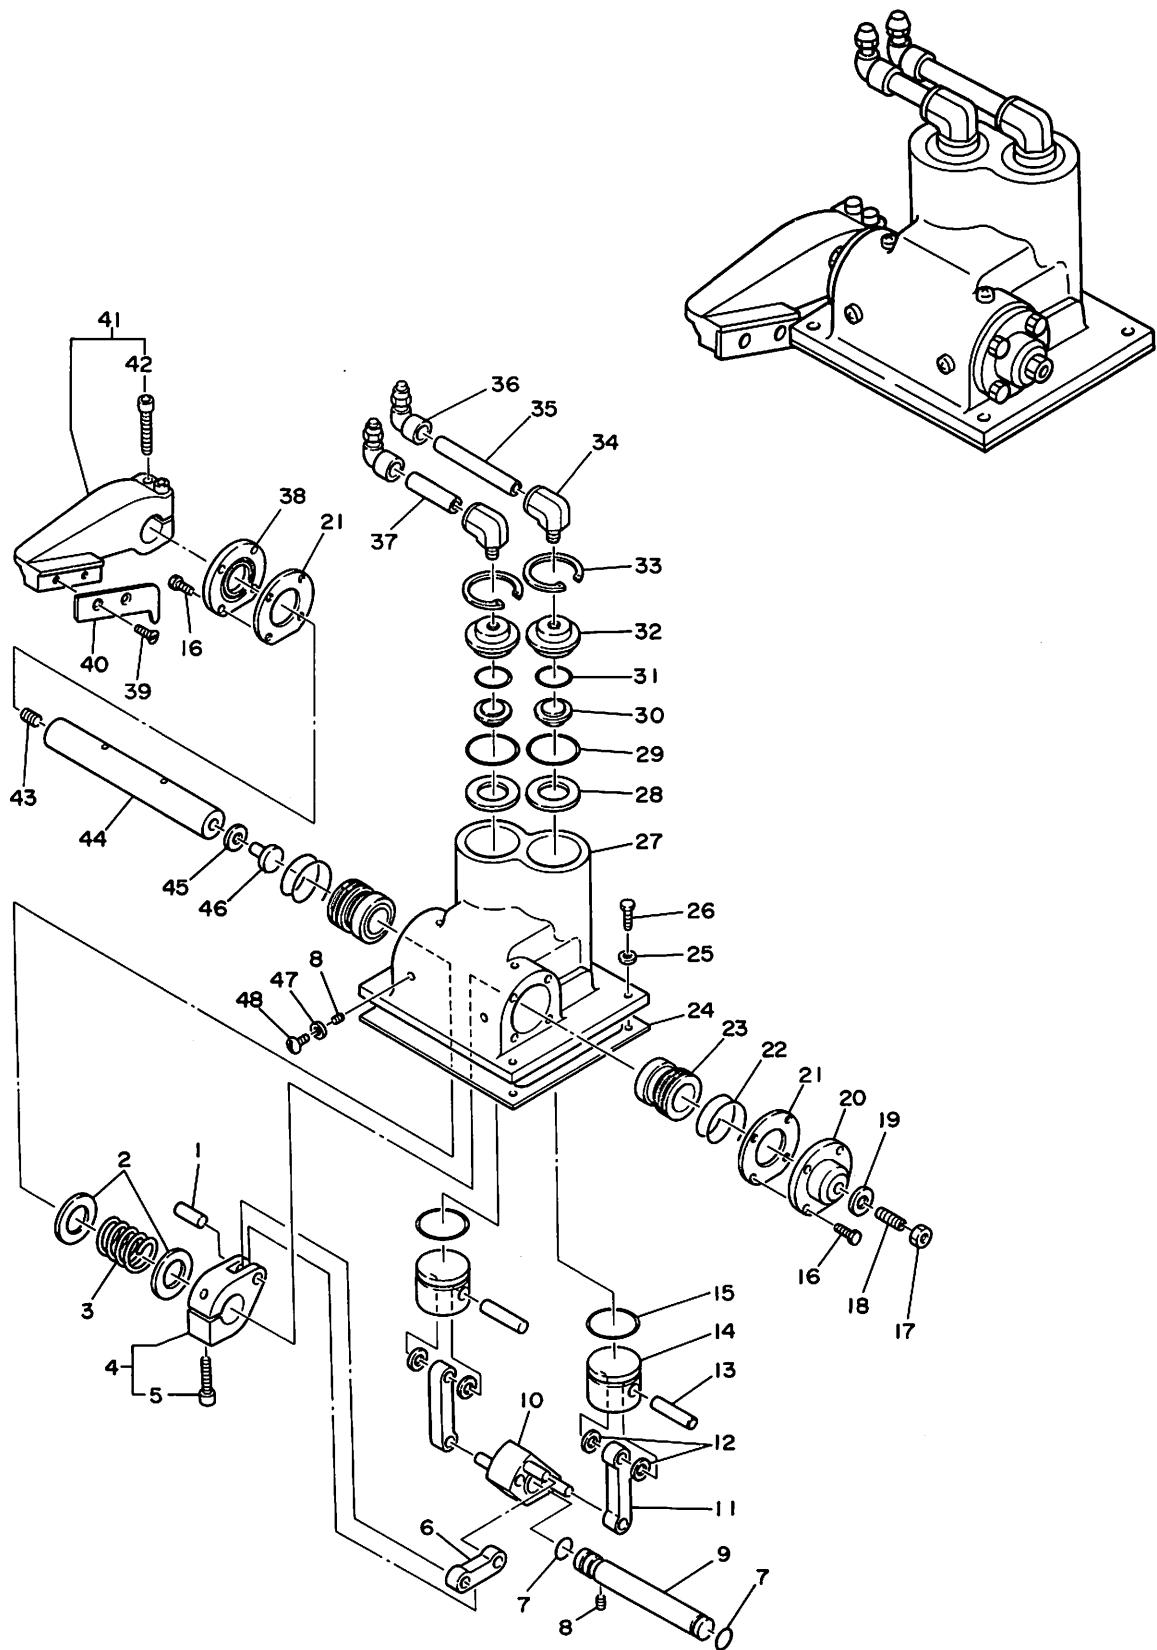

※ Information included in this part list is subject to change without prior notice.
