INTRODUCTION

The new Willcox & Gibbs 500/IV is the latest design in Overlock and Safety stitch machines. You will benefit from its ease of handling, fast pickup in starting and smooth, quiet running. It is automatically lubricated and ruggedly designed for trouble-free performance. As the operator, you will appreciate these features helping you to gain more production with less fatigue as you operate. Willcox & Gibbs will continue to lead the way in developing new machines that will benefit the Operator, achieve more production — with greater ease.

OPERATORS' INSTRUCTION

LUBRICATION (Fig. 1, 2, 3)

CAUTION: The oil was drained from the machine when shipped. Refill with oil before operating.

The 500/IV features fully automatic lubrication with a concealed forced air cooling system. The oil is pressurized by a pump to the internal surfaces of the connections through the inner Crankshaft.

A new machine should be run at least two weeks at a speed not to exceed 5,000 r.p.m. At the end of two weeks, the original oil should be drained out and replaced.

Operational speed after two weeks run-in may be 6,000 r.p.m. (Fig. 3).

Use recommended type oil only.

MACHINE SPEED	PULLEY SIZE	DIAMETER in INCHES
4900	631	3 1/8"
5100	632	3 1/4"
5275	633	3 3/8"
5450	634	3 1/2"
5650	635	3 5/8"
5825	636	3 3/4"
6000	637	3 7/8"

Fig. 3

Note: The above pulley size is based on a motor speed of approx. 3,480 r.p.m. (60Hz, 2-pole)

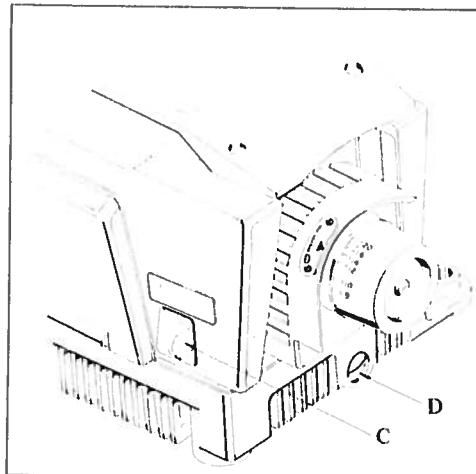

Fig. 1

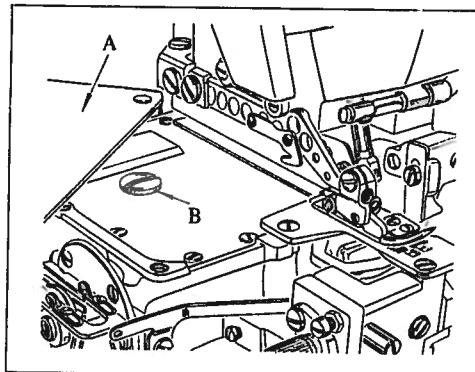

Fig. 2

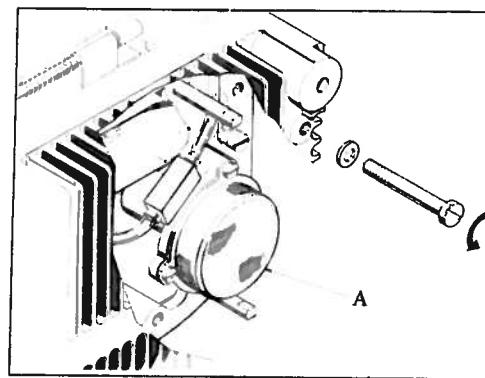

Fig. 4

To replace the oil.

Remove the machine from its stand and set it on a table. Remove Drain Plug (Fig. 1, D) which is located on the Oil Pan just below the Handwheel. Drain oil from machine. Replace the plug and return the machine to its stand.

To refill, swing out the Cloth Plate (Fig. 2, A) to the left and remove the Filler Plug (B).

Pour fresh oil into the reservoir using the funnel supplied with the accessories until the oil reaches the upper line of the Sight Gauge (Fig. 1, C).

The oil level should be kept between the two lines on the Sight Gauge.

CAUTION TO OIL FILTER SCREEN

The Oil Filter Screen (Fig. 4, A) should always be kept clean. Since the lubrication oil is filtered by this Screen and delivered to all the frictional surfaces, clogging of this Screen may cause lack of lubrication and accidental seizure of parts.

Check and clean the Oil Filter Screen every three months, or if necessary, replace with a new Screen when:

the oil jet in the Oil Splash Sight Window is restricted or weak, or the oil contains foam or debris.

HOW TO CLEAN YOUR MACHINE

Cleaning the machine is a simple but important operation. It is not necessary to remove any part. Merely release the foot and swing it out to the left. Swing out the covers and remove all the collected lint from around the loopers, feed slots, and under the needle plate. Blow out any loose lint or use a lint brush. Replace covers and return foot to the sewing position.

REPLACING THE NEEDLES (Fig. 5, 6, 7, 8)

To replace needles, turn the Handwheel until the Needle Bar is in its highest position. Lift up the Hand Lift Lever (Fig. 5, E) and swing foot to the left (F).

503, 504/IV (Fig. 6)

Loosen Needle Clamp Nut (A) and withdraw needle. Insert new needle into the needle hole as far as it will go, and position scarf of the needle to the rear of the machine. Retighten nut (A).

514/IV (Fig. 7)

515, 516/IV (Fig. 8)

Loosen Needle Clamp Screws (B) and withdraw needle. Insert new needle into the needle hole as far as it will go, and position scarf of the needle to the rear of the machine. Retighten screws (B).

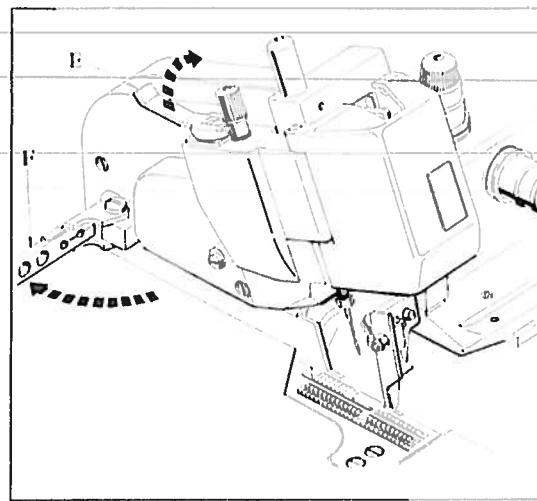

Fig. 5

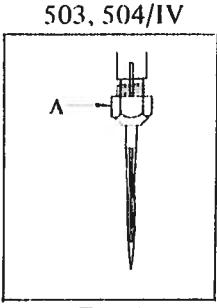

Fig. 6

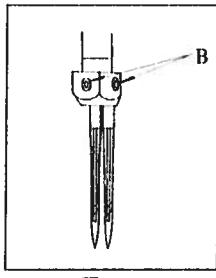

Fig. 7

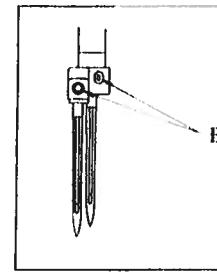

Fig. 8

THREADING YOUR MACHINE (Fig. 9, 10, 11, 12, 13, 14)

When a machine is received, note that it has been threaded correctly. The simplest way to rethread it is to tie the new threads to those already in the machine and pull the new threads through, making sure that the knots will go through the looper eyes and needles.

In case the machine requires a complete rethreading refer to the threading diagrams.

REGULATING THREAD TENSION

The amount of tension required varies with type of material, thread, stitch length, etc.
Adjust individual thread tensions as follows.

To increase tension — Turn nut clockwise.

To decrease tension — Turn nut counterclockwise.

THREADING DIAGRAMS

Fig. 11: Needle threading for elastic synthetic thread.

REGULATING SEAM WIDTH

515, 516/IV (Fig. 15)

1. Turn the Handwheel until the Upper Knife is at its lowest point.
2. Loosen the Lower Knife Holder Screw (A). Pull the Lower Knife Holder (the Lower Knife Clamp Stud Nut. B) to the left as far as it will go and lightly tighten screw (A).
3. Loosen the Upper Knife Clamp Screws (C) and move the Upper Knife Clamp (D) to the right or left until the desired width is obtained.
4. Tighten the Upper Knife Clamp Screws (C).
5. Loosen the Lower Knife Holder Screw (A), then the Lower Knife Holder will return to position by spring action.
6. Retighten screw (A).

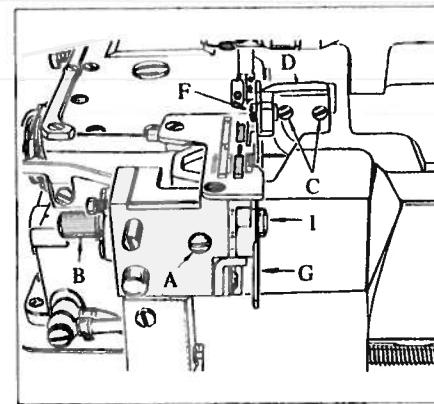

Fig. 15

503, 504, 514/IV (Fig. 16)

1. Turn the Handwheel until the Upper Knife is at its lowest point.
2. Loosen the Lower Knife Holder Screw (A). Push the Lower Knife Holder (the Lower Knife Clamp Screw. E) to the left as far as it will go and lightly tighten screw (A).
3. Loosen the Upper Knife Clamp Screws (C) and move the Upper Knife Clamp (D) to the right or left until the desired width is obtained.
4. Tighten the Upper Knife Clamp Screws (C).
5. Loosen the Lower Knife Holder Screw (A), then the Lower Knife Holder will return to position by spring action.
6. Retighten screw (A).

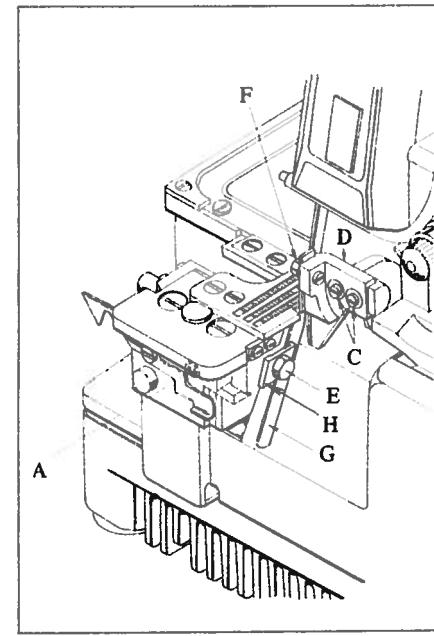

Fig. 16

ADJUSTING THE UPPER AND LOWER KNIVES

UPPER KNIFE

515, 516/IV (Fig. 15, 17)

1. Loosen the Lower Knife Holder Screw (Fig. 15, A). Pull the Lower Knife Holder (the Lower Knife Clamp Stud Nut. B) to the left as far as it will go and lightly tighten screw (A).
2. Remove the Upper Knife Nut (F) and raise the knife to remove. Replace with a new knife but do not tighten nut (F) completely.
3. Turn the Handwheel until the Knife Holder (D) is in its lowest position. Set the Upper Knife so that its cutting edge overlaps the Lower Knife by $1/32"$ (.5-1.0mm) (Fig. 17).
Retighten nut (F).
4. Loosen the Lower Knife Holder Screw (A), then the Lower Knife Holder will return to position by spring action.
5. Retighten screw (A).

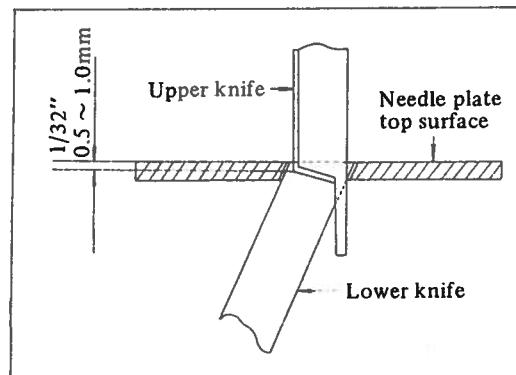

Fig. 17

ADJUSTING THE UPPER AND LOWER KNIVES (cont'd)

503, 504, 514/IV (Fig. 16, 17)

1. Loosen the Lower Knife Holder Screw (A). Push the Lower Knife Holder (the Lower Knife Clamp Screw, E) to the left as far as it will go and lightly tighten screw (A).
2. Remove the Upper Knife Screw Nut (F) and raise the knife to remove.
Replace with a new knife but do not tighten nut (F) completely.
3. Turn the Handwheel until the Knife Holder (D) is in its lowest position.
Set the Upper Knife so that its cutting edge overlaps the Lower Knife by $1/32''$ (.5-1.0mm) (Fig. 17). Retighten nut (F).
4. Loosen the Lower Knife Holder Screw (A), then the Lower Knife Holder will return to position by spring action.
5. Retighten screw (A).

LOWER KNIFE

515, 516/IV (Fig. 15, 17)

1. Loosen the Lower Knife Holder Screw (Fig. 15, A). Pull the Lower Knife Holder (the Lower Knife Clamp Stud Nut, B) to the left as far as it will go and lightly tighten screw (A).
2. Loosen the Clamp Stud Nut (B) and remove the Lower Knife.
3. Insert a new Lower Knife (G) into the groove of the Lower Knife Clamp Stud (I), setting the blade so that the cutting edge is level with the top of the Needle Plate (Fig. 17). Tighten nut (B).
4. Loosen the Lower Knife Holder Screw (A), then the Lower Knife Holder will return to position by spring action.
5. Retighten screw (A).

503, 504, 514/IV (Fig. 16, 17)

1. Loosen the Lower Knife Holder Screw (Fig. 16, A). Push the Lower Knife Holder (the Lower Knife Clamp Screw, E) to the left as far as it will go and tighten screw (A) lightly.
2. Loosen the Lower Knife Clamp Screw (E) and remove the Lower Knife.
3. Insert a new Lower Knife (G) into the Lower Knife Clamp (H), setting the blade so that the cutting edge is level with the top of the Needle Plate (Fig. 17). Tighten screw (E).
4. Loosen the Lower Knife Holder Screw (A), then the Lower Knife Holder will return to position by spring action.
5. Retighten screw (A).

Note: A right angled Upper Knife is also available as an auxiliary sales item.

Knives must be kept sharp. The Lower Knife may be sharpened by use of a grinder while making sure that the correct angle is maintained.

Upper Knife may be sent to our distributors or returned to us for resharpening since it requires special grinding.

REGULATING THE STITCH LENGTH (Fig. 18, 19)

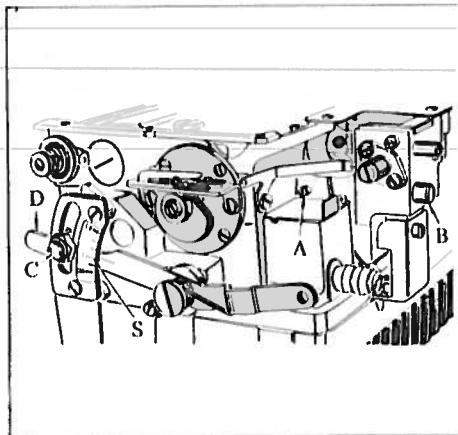

To change the stitch length, swing Cloth Plate to the left. Loosen Feed Eccentric Push Rod Screw (Fig. 18, A) and press in the Eccentric Push Rod (B). While pressing in on the rod, turn the Handwheel in the sewing direction until the rod drops into the hole in the eccentric.

Turn the Handwheel toward the desired stitch length as shown on the Handwheel and cover for a longer or shorter stitch (Fig. 19).

Longer Stitch (less stitches per inch) — Turn Handwheel clockwise.

Shorter Stitch (more stitches per inch) — Turn Handwheel counterclockwise.

When desired stitch length is obtained, release the rod (B) and tighten screw (A)

(515, 516)

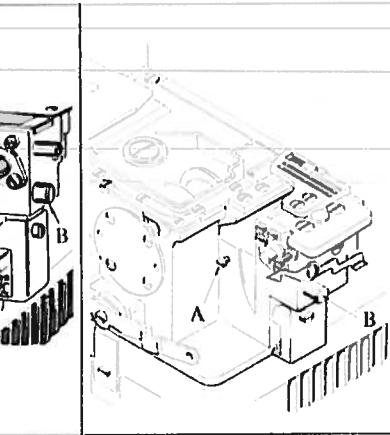

Fig. 18

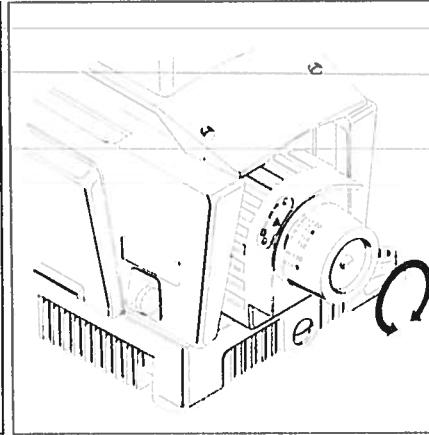

Fig. 19

ADJUSTING THE DIFFERENTIAL FEED REGULATING LEVER (Fig. 18, 20)

The following feed ratios are preset at the factory.

Seaming machines 1/2:1 stretch to 2:1 filling

Shirring machines 1:1 seaming to 3:1 shirring

TO ADJUST:

Seaming Machines — Loosen Thumb Nut (C). Line up mark on Differential Lever (D) with setting shown on Indicator Plate (S). Retighten nut (C).

INDICATOR PLATE SETTING	=	DIFFERENTIAL : MAIN FEED RATIO
1.8	=	2 : 1 filling
1	=	1 : 1
0.6	=	1/2 : 1 stretch

Shirring Machines — Intermittent shirring can be obtained by use of the Knee Control provided with Shirring Machines. When the range has been set the adjustable stops (E) are positioned and Thumb Nut (C) is left loose.

INDICATOR PLATE SETTING	=	DIFFERENTIAL : MAIN FEED RATIO
3	=	3 : 1 shirring
2	=	2 : 1 shirring
1	=	1 : 1 seaming

Please note all settings are approximate figures that will vary with fabric weights, thread, stitch length, etc.

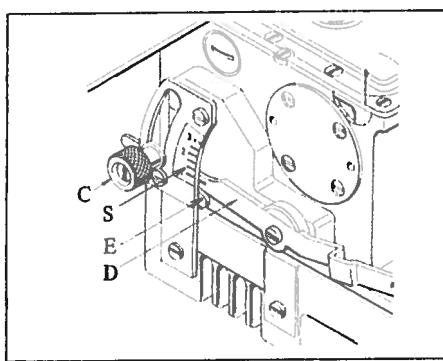

Fig. 20

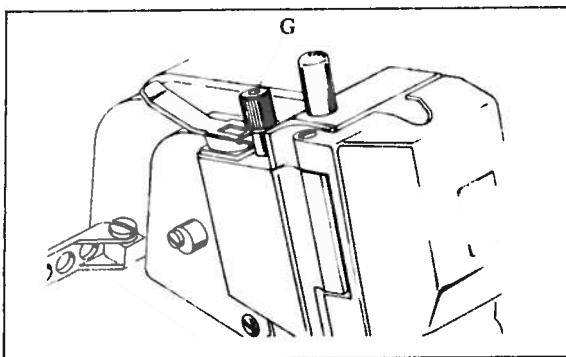

Fig. 21

PRESSURE OF PRESSER FOOT

Pressure of the Presser Foot is regulated by means of the Presser Regulating Thumb Screw (Fig. 21, G). Pressure on the Presser Foot should be just enough to feed material and obtain proper stitch formation. Too much pressure may spoil material and give it more stretch than it needs. Too little pressure may cause uneven feeding or stitches.

MECHANICS' INSTRUCTION

ADJUSTING NEEDLE BAR HEIGHT (Fig. 22, 23, 24)

With a new needle in the machine, turn the Handwheel until the needle is in its highest position. Use Timing Gauge, check the clearance between the point of the needle and the top of the Needle Plate. If clearance is not correct, loosen the Needle Bar Connecting Bracket Screw and reset the Needle Bar correctly. Check to make sure the needle is in the center of the needle hole and tighten the bracket screw securely.

FEDERAL STITCH	MODEL	DIMENSION		FIG.	NOTE
		INCH	MM		
503	503/IV	.410	10.4	22	
504	504/IV	.410	10.4	22	
505	505/IV	.410	10.4	22	
512	514/IV	.465	11.8	23	check to the left needle
514	514/IV	.465	11.8	23	check to the left needle
515	515/IV	.418	10.6	24	check to the right needle
516	516/IV	.418	10.6	24	check to the right needle

EXCEPTIONS:

515 (516)/IV-38, -39398" 10.1mm
 515 (516)/IV-51, -52473" 12.0mm

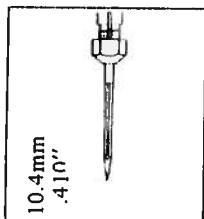

Fig. 22

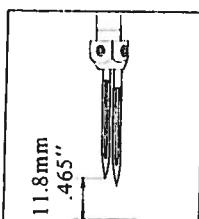

Fig. 23

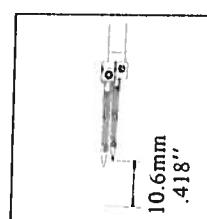

Fig. 24

ADJUSTING NEEDLE GUARDS (Fig. 25, 26, 27, 28)

Machine are fitted with both front and rear needle guards. Set Rear Guard first.

Rear Needle Guard

515, 516/IV (Fig. 25, 27)

Turn Handwheel until Needle Bar is at its lowest position. Loosen two screws (U) holding Needle Guard Bracket. Move bracket until the top of the Overlock needle eye is .020" (0.5mm) below the line (T) of the Needle Guard, Rear. Tighten screws (U). Loosen screw (R) holding Needle Guard, Rear. When point of the Left Looper comes to the centerline of the needle, adjust the Needle Guard (S) back and forth so that it lightly touches the needle. Tighten screw (R).

503, 504, 514/IV (Fig. 26, 27)

Turn Handwheel until Needle Bar is at its lowest position.

Loosen two screws (N) holding Needle Guard Bracket. When point of the Left Looper comes to the centerline of the needle, adjust the Needle Guard (S) back and forth so that it lightly touches the needle. Tighten bracket screws (N).

Front Needle Guard (Fig. 28)

Adjust Needle Guard so there is a space of .004 – .008" (.1 – .2mm) between the Needle and Guard.

CAUTION: Needle Guard must be reset when needle size is changed.

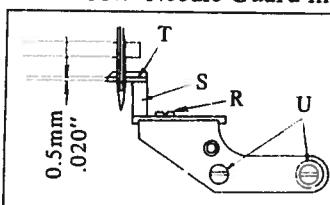

Fig. 25

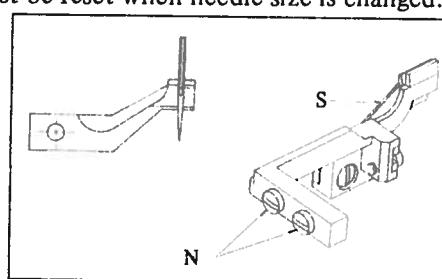

Fig. 26

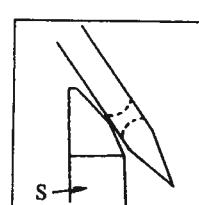

Fig. 27

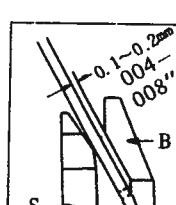

Fig. 28

LEFT LOOPER ADJUSTMENT (Fig. 29, 30)

Clearance from point of Looper to centerline of Needle

FEDERAL STITCH	MODEL	DIMENSION	
		INCH	MM
503	503/IV	.154 (5/32)	3.9
504	504/IV	.154 (5/32)	3.9

512	514/IV	.154 (5/32)	3.9
514	514/IV	.169 (11/64)	4.3
515	515/IV	.154 (5/32)	3.9
516	516/IV	.154 (5/32)	3.9

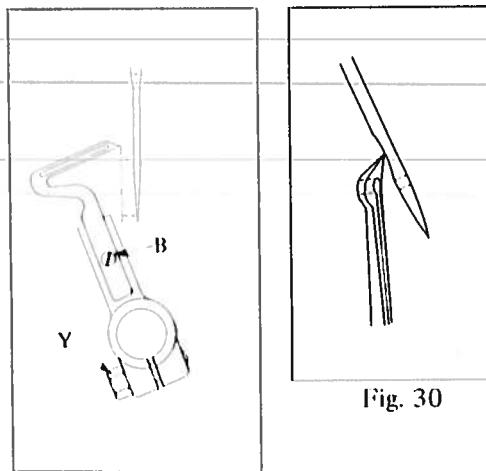

Fig. 29

Fig. 30

Insert the Looper into the Looper Lever, making sure it reaches the bottom of slot. Tighten screw (B). Turn the Handwheel until the Looper is in the extremely left position.

Loosen clamp screw (Fig. 29, Y). Set point of Looper from centerline of Needle to correct dimension shown above and lightly tighten screw (Y). Turn Handwheel until Looper point is on the centerline of the Needle. Move Looper Lever, if necessary, along its shaft so that the Looper point just touches the needle at the scarf (Fig. 30), tighten screw (Y). Recheck clearance dimension and tighten screw (Y) securely.

RIGHT LOOPER ADJUSTMENT (Fig. 31, 32, 33, 34, 35)

Clearance from Looper (eye) or Spreader (bottom of V groove) to centerline of Needle (Fig. 31, 32).

FEDERAL STITCH	MODEL	DIMENSION	
		INCH	MM
503	503/IV	.130 (1/8)	3.3
504	504/IV	.130 (1/8)	3.3
505	504/IV	.130 (1/8)	3.3
512*	514/IV*	-0-* -.004-.008"	-0-* -.010-.020mm
514	514/IV	.157 (5/32)	4.0
515	515/IV	.130 (1/8)	3.3
516	516/IV	.130 (1/8)	3.3

* aligned with left needle eye

Turn Handwheel until the Looper is at its extremely left position. Loosen clamp screw (Fig. 35, K) and move Looper until necessary dimension is obtained as listed above.

At the same time, make sure the Looper points cross as shown in Fig. 33.

Clearance between the Needle (N) and Right Looper should be .004 - .008" (0.1 - 0.2mm) (Fig. 34).

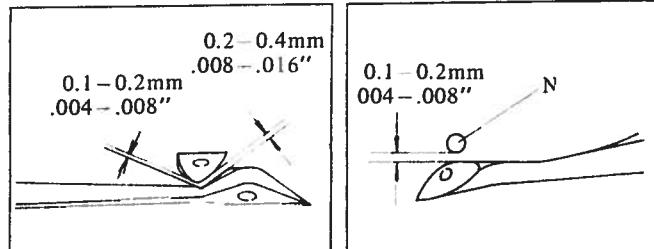

Fig. 33

Fig. 34

If the Right Looper strikes the Left Looper in passing, advance or retard the timing by adjusting the Right Looper Lever.

RIGHT LOOPER LEVER ADJUSTMENT (Fig. 35)

Turn Handwheel until the Right Looper is at its lowest position.

Clearance between Crank Pin and Machine Bed
should be:

MODEL	DIMENSION	
	INCH	MM
503/IV	.157 (5/32)	4.0
515/IV	.157 (5/32)	4.0
504/IV	.138 (9/64)	3.5
514/IV	.138 (9/64)	3.5
516/IV	.138 (9/64)	3.5

Note: To check this setting the Oil Pan must be removed.

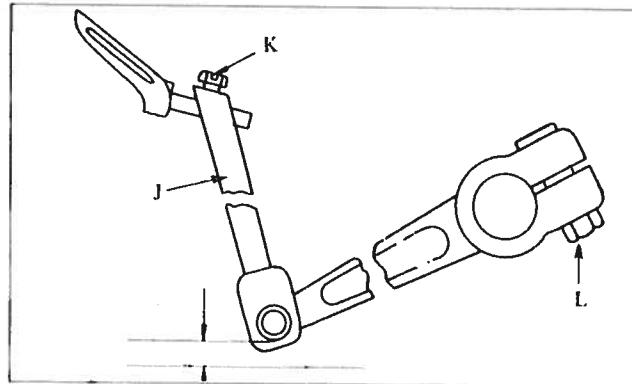

Fig. 35

If adjustment is necessary, loosen clamp screw (L). Adjust the Looper Lever (J) up or down until the correct setting is obtained. Retighten clamp screw (L). Adjust the Looper back and forth, right and left in the holder. Retime the Looper to the Needle since raising or lowering the lever will alter the distance between the Looper eye and Needle centerline. Securely tighten screw (K) and (L). Replace Oil Pan.

CAUTION: Make sure when tightening screw (L) that you do not twist the Looper Lever causing a bind in the machine.

Various Right Loopers are provided as listed below for use with various size needles.

For ease of identification looper have been marked with a looper marking.

	MODEL	LOOPER MARKING	NEEDLE SIZE IDENTIFICATION			PART NUMBER

CHAINSTITCH LOOPER ADJUSTMENT (Fig. 36, 37, 38)

Clearance from point of Looper to centerline of Needle

MODEL	INCH	MM
515-516/IV	.083 (5/16)	2.1

Insert Chainstitch Looper into Looper Lever (Fig. 36, O) until it touches the Looper Regulator (P).

Tighten screw (Q). Turn Handwheel until the Looper is at its extremely left position (Fig. 37).

Loosen clamp screw (R) and move Looper Lever until the necessary clearance is obtained. Tighten screw (R).

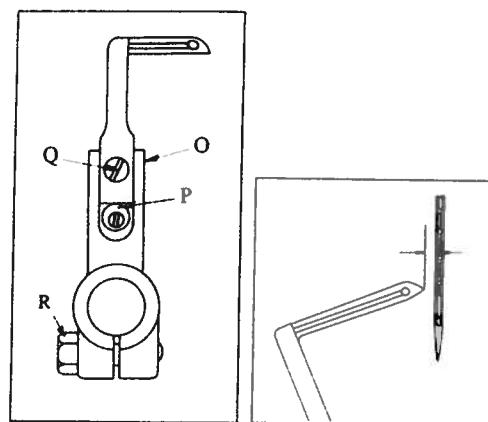

Fig. 36

Fig. 37

CHAINSTITCH LOOPER HEIGHT ADJUSTMENT (Fig. 38)

Turn Handwheel and check the eye to eye relationship of the needle and Looper. The eye of the needle and the eye of the Looper should cross when the Looper is coming in to the needle and on the way back. If the eye to eye relationship is not obtained, adjust the Looper Regulator (Fig. 36, P) to the left or right. This adjustment will raise or lower the Looper eye.

The Looper must be set so that the point of the Looper does not quite touch the needle as it passes. When the above settings are complete, tighten clamp screw (R) securely.

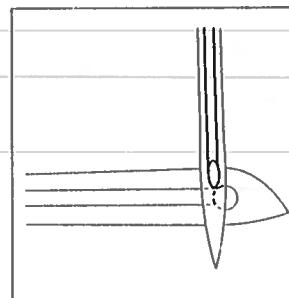

Fig. 38

CHAINSTITCH LOOPER AVOIDING MOTION ADJUSTMENT (Fig. 39)

To change the looper avoiding motion due to the diameter of the needle. When larger or smaller needles are fitted to the machine make the following adjustment.

Swing out Cloth Plate. Remove Bedplate. Loosen Looper Avoiding Connection Pin Nut. Turn Looper Avoiding Regulating Screw. (Fig. 39, G).

Less motion — Turn screw clockwise. This will raise the Looper Avoiding Connection Pin.

More motion — Turn screw counterclockwise. This will lower the Looper Avoiding Connection Pin.

Check that the Chainstitch Needle passes just behind the Chainstitch Looper on the downstroke. Retighten Looper Avoiding Connection Pin Nut. Replace Bedplate and Cloth Plate.

FEED ADJUSTMENT (Fig. 39, 40, 41)

Feed Dogs have generally been preset at the factory with a front to back tilt when the machine was sewn off. Before adjusting feeds, turn the Handwheel until the feeds are at their highest position.

Standard height of Main Feed is 0.47" (3/64) 1.2mm above the needle plate at its rear end tooth. A straight edge can be placed across the top of the feeds (Fig. 41).

Loosen Feed Dog Screws (Fig. 40, A & B) and raise or lower feeds until the proper height is obtained (Fig. 41).

Retighten screws (A & B).

To tilt the Feed Dogs, remove Plug Screw (Fig. 39, C) and loosen Feed Bar Hinge Pin Screw (D). Remove screw (E) and turn screw (F) until the desired tilt is obtained.

Retighten screw (D) and replace screws (C & E).

Woven materials — Set feeds level

Knit materials — Tilt feeds higher in the front than the rear

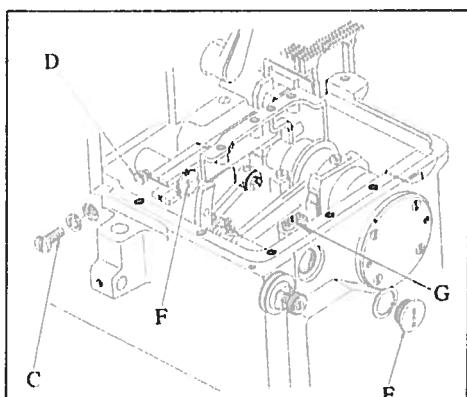

Fig. 39

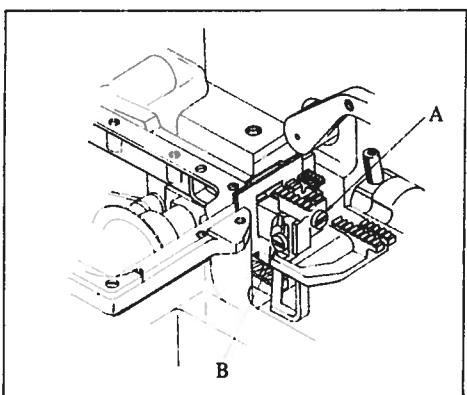

Fig. 40

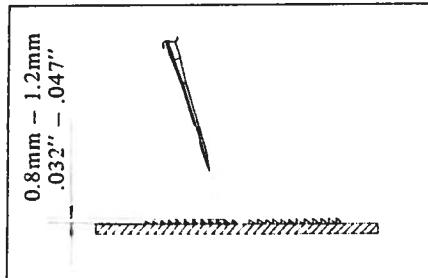

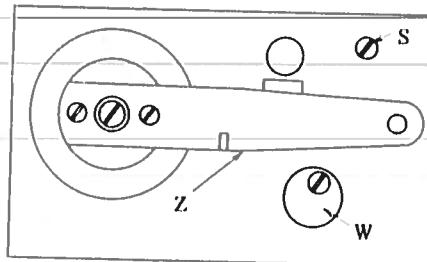

Fig. 41

PRESSER FOOT ARM ALIGNMENT (Fig. 42)

Loosen screw (S) and move Presser Arm (P) to the right or left until the face of the Presser Arm touches the Machine Arm evenly. Securely tighten screw (S).

503, 504, 514/IV

515, 516/IV

Fig. 42

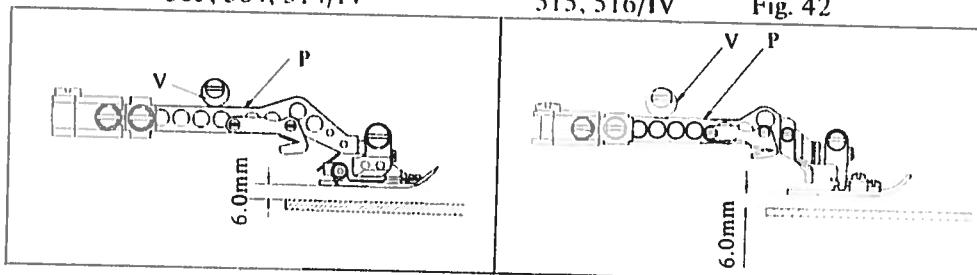

Fig. 43

PRESSER FOOT LIFT ADJUSTMENT (Fig. 42, 43, 44)

Loosen screws holding Regulators (Fig. 42, W & Fig. 43, V). Turn Regulators to allow the highest lift.

Tighten both screws.

Turn Handwheel until Needle Bar is in the lowest position. Remove (2) lock screws (Fig. 44, N).

Turn screw (M) left or right until a lift is obtained of .236" (15/64) 6.0mm.

Replace screws (N). After this setting has been made, position Regulators (V & W) as stops so they are in contact with the Presser Arm (P) and Foot Lift Lever (Z).

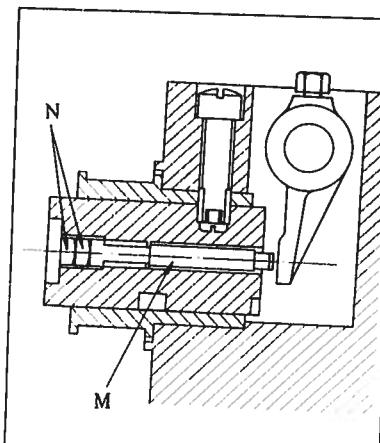

Fig. 44

CHAINSTITCH LOOPER THREAD CONTROL ADJUSTMENT (Fig. 45)

Loosen screws holding Looper Thread Takeup Eyelets (A) and move eyelets until the coiled ends line up with the engraved line on Guide Bracket (B). Tighten both screws.

Turn Handwheel until the Needle Bar is at the highest position. Loosen the two screws holding bracket (B). Set the bracket in a horizontal position. With the left screw loose, position Looper Thread Takeup Guide (D) so that the bottom edge of guide (D) is .060" (1/16) 1.5mm above the top of bracket (B). Tighten both screws securely.

Loosen the two screws holding takeup (C) and turn the Handwheel until the Needle Bar is at the highest position. Set the takeup (C) so that the flat portion is at a 10° angle to bracket (B). Tighten takeup screws. Check to make sure that the takeup clears guide (D).

RESPECTIVE POSITIONS REQUIRED AT MEASURING

- A) Right Needle, at upper dead Point.
- B) Right Looper, at left dead Point.
- C) Left Looper, at left dead Point.
(Needle Size 11)
- D) Left Looper, at left dead Point.
(Needle Size 14)
- E) Chainstitch Looper, at left dead Point.
(Needle Size 11)
- F) Chainstitch Looper, at left dead Point.
(Needle Size 14)
- G) Main Feed Dog, at upper dead Point.
- H) Highest height of Presser Foot lifted.
- I) Needle, at upper dead Point.
- J) Right Looper, at left dead Point.
(Needle Size 9)
- K) Left Looper, at left dead Point.
(Needle Size 9)
- L) Left Needle, at upper dead Point.

BASIC POSITIONS ON MEASURING

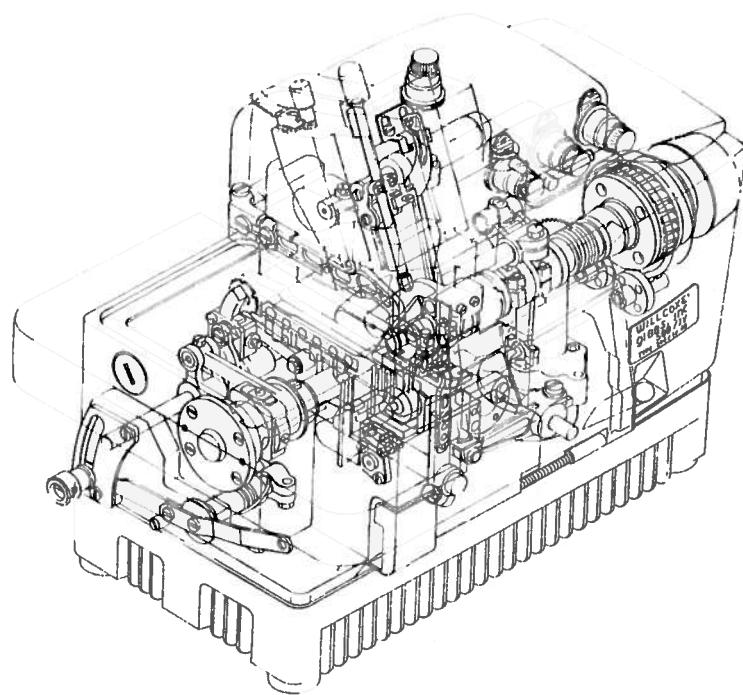

- from Needle Plate top to Needle Point.
- from Left side of Needle to Looper Thread Eye Center.
- from Left side of Needle to Looper Point.
- from Left side of Needle to Looper Point.
- from Left side of Needle to Looper Point.
- from Left side of Needle to Looper Point.
- from Needle Plate top to top Edges of Teeth.
- from Needle Plate top to Sole of Presser Foot.
- from Needle Plate top to Needle Point.
- from Left side of Needle to Looper Thread Eye Center.
- from Left side of Needle to Looper Point.
- from Needle Plate top to Needle Point.
