

## **LED18**

- Ours use the latest LED technology, COB (circuit on board)
- Multiple LED Chips that form a single module.
- Takes up less space and appears like a lighting panel and not like individual lights
- Gets the highest and brightest potential of the LED
- Efficiency increases and failure decreases
- Enables our LED18 to be brighter & more focused than others with 30 or more LEDs
- Rubber insert around magnet cuts down on movement of light due to vibration and on the marring of the machine where mounted
- On/Off switch mounted on actual fixture easier to access. User doesn't have to reach back to the magnet mounting back on the machine
